

Installing McAfee 8.5i on your computer.

Uninstall any previous versions of McAfee by going to Start, Control Panel, Add/Remove Programs, Find McAfee software and click on it then click on “Remove”.

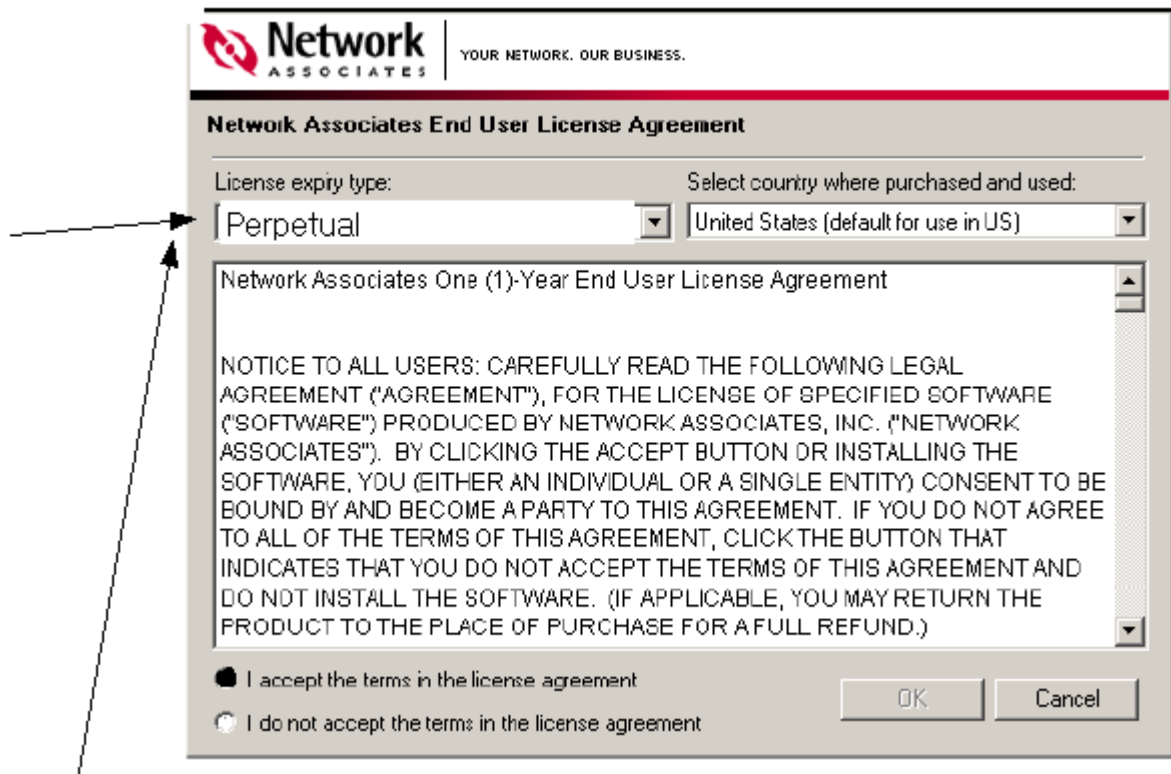

Begin the McAfee 8.5i installation by going to “My Computer” and double-clicking on your cd-rom drive.

These are the files that will appear. Double click on the file named “Setup.exe”.

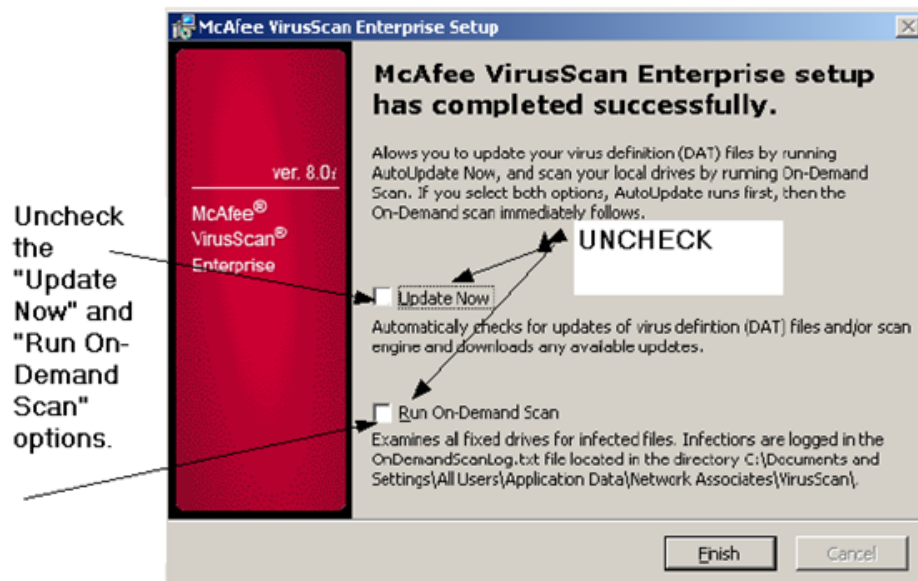

Follow the on screen prompts.

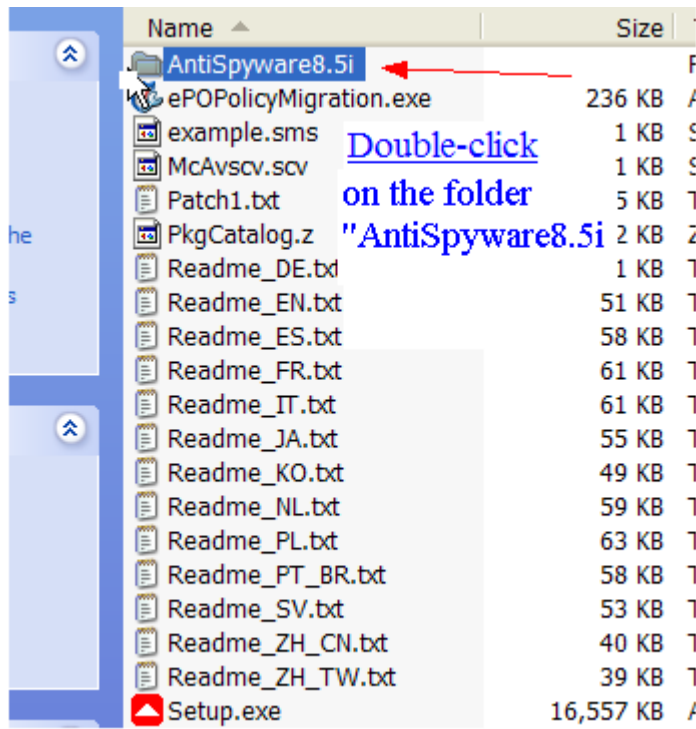

When you get to the screen that asks the type of license, you will choose “Perpetual”.

In the McAfee VirusScan Enterprise setup has completed successfully dialog box, choose whether to run an update task and/or an on-demand scan task upon completion of installation.

When McAfee 8.5 is installed go back to the McAfee cd and double click again. This time you will be choosing the folder “AntiSpyware8.5i.

The following screen will appear:
