

Whom Are We Serving? Students by Discipline & Residence

Our January 2008 *In the Abstract* presents the mean number and percentage of students taking one or more courses in each discipline by residence (Chicago, in-district, out-of-district but not Chicago) over the past three fall semesters. Note that mean values represent the average number of individuals taking courses in the discipline each fall term. Some students will have enrolled in courses in more than one discipline and/or enrolled in courses in the same discipline in multiple fall semesters. Italic print notes a discipline not offered in all three years; means were calculated using the number of years the discipline was offered.

What do data show? They show a large variation by discipline in the number of students taking courses in that discipline; in general, about 85 percent of students taking a course in a discipline are from in-district; and in general, the percentage of Chicago residents and residents from other communities outside Oakton's district is about the same. Disciplines that draw the largest proportion of their students from out-of-district include FIR, MFG, and PTA. As you consider these data, look at both the number of individuals served by the discipline and the residence of students. The Office of Research can provide more detailed data upon request.

Three-Year Fall Means (*number of years adjusted if discipline not taught every year - noted by italics*)
