As this lab is a continuation of Lab 4, there will be no general display of the description of the program as our goal is to create a form that the user will fill in and our code will process. The solution of Lab 4 will have all JLabels, JButton and JTextField displaying, but none of them will be functioning.

The user will enter data for the JTextField, associated with the Assessment Home Value, the Decimal Value of School Tax Rate and the Decimal Value of County Tax Rate.

When the user clicks on the Calculate JButton the program calculates and displays the School Taxes, County Taxes and Total Taxes JTextField.

When the user clicks on the Exit JButton, the program closes.
